Hearing range describes the range of frequencies that can be heard by humans or other animals, though it can also refer to the range of levels. The human range is commonly given as 20 to 20,000 Hz, although there is considerable variation between individuals, especially at high frequencies, and a gradual loss of sensitivity to higher frequencies with age is considered normal.

Hearing range - Wikipedia

Online homework and grading tools for instructors and students that reinforce student learning through practice and instant feedback.

Preface Elementary Differential Equations with Boundary Value Problems is written for students in science, engineering, and mathematics who have completed calculus through partial differentiation.

ELEMENTARY DIFFERENTIAL EQUATIONS - Trinity University

A condenser is an apparatus or item of equipment used to condense (change the physical state of a substance from its gaseous to its liquid state). In the laboratory, condensers are generally used in procedures involving organic liquids brought into the gaseous state through heating, with or without lowering the pressure (applying vacuum) although applications in inorganic and other chemistry ...

Condenser (laboratory) - Wikipedia

Welcome! Random is a website devoted to probability, mathematical statistics, and stochastic processes, and is intended for teachers and students of these subjects. The site consists of an integrated set of components

that includes expository text, interactive web apps, data sets, biographical sketches, and an object library.
