In military engineering, earthworks are, more specifically, types of fortifications constructed from soil. Although soil is not very strong, it is cheap enough that huge quantities can be used, generating formidable structures. Examples of older earthwork fortifications include moats, sod walls, motte-and-bailey castles, and hill forts. Modern examples include trenches and berms.

In a general bidding process of any construction work, the project estimation is the most vital thing to win the process. An almost accurate quantity takeoff sheet helps the architects, engineers and contractors to win any bid. So it is very important to get an almost accurate estimation of the project.
