The Japan Society of Fluid Mechanics (JSFM) originated from a voluntary party of researchers working on fluid mechanics in 1968. The objectives of the society were to discuss about scientific and engineering problems relevant to fluid motion among researchers working in Physics, Engineering and the interdisciplinary fields and to assist in their research activities.

Nanoparticles are particles between 1 and 100 nanometres (nm) in size with a surrounding interfacial layer. The interfacial layer is an integral part of nanoscale matter, fundamentally affecting all of its properties. The interfacial layer typically consists of ions, inorganic and organic molecules.

Page 3 1 Å¥ Chemistry and electricity The connection between chemistry and electricity is a very old one, going back to ALESSAN- DRO VOLTA'S discovery, in 1793, that electricity could be produced by placing two dissimilar metals on opposite sides of a moistened paper.

Fouling is the accumulation of unwanted material on solid surfaces to the detriment of function. The fouling materials can consist of either living organisms or a non-living substance (inorganic and/or organic).Fouling is usually distinguished from other surface-growth phenomena, in that it occurs on a surface of a component, system or plant performing a defined and useful function, and that ...

4.1.1. Closing of the mould. The first step in the steam-chest moulding cycle is the closing of the mould.

4.1.2. Filling of the mould. Foamed beads are drawn by air pressure out of a container and blown into the mould by an injector, which usually functions according to the venturi-principle.

Past and present developments in polymer bead foams and

The concept of bone regeneration is to use a scaffold that can act as a three-dimensional (3-D) temporary template to guide bone repair. Ideally the scaffold will stimulate the natural regenerative mechanisms of the human body.

Make it a double: A method for the selective α -dehydrogenation of amides in the presence of other carbonyl moieties under mild conditions has been developed. This strategy relies on electrophilic activation coupled to in situ selective selenium-mediated dehydrogenation. Mechanistic experiments suggest formation of an electrophilic Se IV species.
