Postharvest Technology of Horticultural Crops Short Course June 17<sup>th</sup> & 24<sup>th</sup>, 2019 at the UC Davis Activities and Recreation Center (ARC) This course covers the biology and current technologies used for handling fruits, nuts, vegetables and ornamentals in California and is designed for research and extension workers, quality control personnel, and business, government or academic ...

### **Welcome - UC Postharvest Technology Center**

In most postharvest applications, the Q 10 value is often used as an evaluation method for predicting the effect of a temperature increase on respiration rates and, inversely, on shelf life. Within a temperature range of 5<sup>o</sup>–25<sup>o</sup>C, the Q 10 value for most crops will be around 2.0 to 2.5; however, some highly perishable crops such as sweetcorn and mushrooms have Q 10 values of 4 to 5 in the ...

Food irradiation is the process of exposing food and food packaging to ionizing radiation. Ionizing radiation, such as from gamma rays, x-rays or electron beams, is energy that can be transmitted without direct contact to the source of the energy capable of freeing electrons from their atomic bonds in the targeted food. The radiation can be emitted by a radioactive substance or generated ...

This paper is a review of optical methods for online nondestructive food quality monitoring. The key spectral areas are the visual and near-infrared wavelengths. We have collected the information of over 260 papers published mainly during the last 20 years. Many of them use an analysis method called chemometrics which is shortly described in the paper.

Food waste or food loss is food that is discarded or lost uneaten. The causes of food waste or loss are numerous and occur at the stages of producing, processing, retailing and consuming.. Global food loss and waste amount to between one-third and one-half of all food produced. Loss and wastage occur at all stages of the food supply chain or value chain. In low-income countries, most loss ...
