10.1 Overview #. Destructuring is a convenient way of extracting multiple values from data stored in (possibly nested) objects and Arrays. It can be used in locations that receive data (such as the left-hand side of an assignment). How to extract the values is specified via patterns (read on for examples).

28.1 Overview #. Proxies enable you to intercept and customize operations performed on objects (such as getting properties). They are a metaprogramming feature.. In the following example, proxy is the object whose operations we are intercepting and handler is the object that handles the interceptions. In this case, we are only intercepting a single operation, get (getting properties).

with the suggestion that the preceding statement be terminated with a semicolon. Some suggest instead the use of leading semicolons on lines starting with '(' or '[' , so the line is not accidentally joined with the previous one.This is known as a defensive semicolon, and is particularly recommended, because code may otherwise become ambiguous when it is rearranged.
