Hipot test makes surety of no current will flow from one point to another point.. Hipot test is the opposite of a continuity test. Continuity Test checks surety of current flows easily from one point to another point while Hipot Test checks surety of current would not flow from one point to another point (and turn up the voltage really high just to make sure no current will flow).

### **What is HIPOT Testing (Dielectric Strength Test)?**

Withstand or Hipot Cable Testing Withstand or hipot testing is used to evaluate the condition of cable insulation during installation, acceptance, or maintenance testing. As a result of a hipot test, at the point of an insulation defect an electrical tree will start to progress, create the insulation breakdown and
